FIGURE 76

Figure 1 consists of 12 histograms arranged horizontally, each representing a different value of  $n$  from 10 to 120. The x-axis for all histograms is 'Number of non-zero elements' ranging from 0 to 120. The y-axis is 'Frequency' ranging from 0 to 100. The histograms show that as  $n$  increases, the distribution of non-zero elements shifts to the right, with the peak frequency decreasing and the spread increasing.

Figure 1 consists of 12 bar charts, labeled (a) through (l), arranged in a 6x2 grid. Each chart shows the percentage of total protein in various fractions (A, B, C, D, E, F, G, H, I, J, K, L) for different protein types (A, B, C, D, E, F, G, H, I, J, K, L) across different conditions (1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12). The y-axis represents the percentage of total protein, ranging from 0 to 100. The x-axis represents the protein type. The legend indicates that the bars represent the percentage of total protein in each fraction.
